

## Geography Intent

Our geography curriculum encourages pupils to be curious about the world around them. We want them to be fascinated by it too! Together, we develop the minds and learning skills of our young geographers. We do this through our key drivers:

- Nurturing and developing pupils' enquiry skills
- Encouraging creativity and lifelong learning
- Wanting to make the world a better place
- Building and expanding geographical language and knowledge

Pupils develop a greater understanding of diverse places and people. They study current issues that affect the ecology of the planet. Geography explores questions about the natural and human aspects of the world. Pupils develop their spiritual, moral, social and cultural understanding of the world. This helps them to become responsible citizens. Pupils will learn about their own locality. But they also develop a knowledge and understanding of the world beyond their own environment.

Pupils also learn about influential people who have affected local and global geography. These may be conservationists, explorers or scientists. We hope this learning inspires pupils to consider future professions.

The strands in geography are:

- Locational knowledge
- Place knowledge
- Human and physical geography
- Geographical skills and fieldwork
- Influential people
